Home Connect Developer Program

Major Updates Coming Soon

We have not been sitting still over the past few months, working hard on making the developer tools and documentation we make available to you both better and more encompassing.

Over the next weeks, we will be making changes to the Developer Portal so keep an eye out for updates!

Take advantage of the latest updates!

take advantage of the latest updates.

News & Updates

This section of the website is devoted to new information about Home Connect Developer Program. Find out more about the new API features, upcoming events and announcements from Home Connect partners. Remember to frequently visit and read updates appearing in this section of website or stay informed on our latest news with our newsletter. Please subscribe [here](#).

News [Changelog](#)

April 21, 2020

April 6, 2020

The API can't stay behind on our documentation and we haven't sat still there either. We've been adding new program and options for our appliances, we are adding the capability to change unit settings and plenty more. Keep track of our change log to see the latest changes and make sure you are taking full advantage of the latest features of our API! Check it out [here](#).

More, More, More

Ever since the launch of the Home Connect Developer Program back in 2015.

we have been expanding the types of appliance categories supported and adding new functionalities for you to work with. Five years later, we now have 14 different appliance categories, each with unique functionalities, characteristics and possibilities.

The latest addition being the cook processor, Bosch Cookit, shows how far we have come, with appliances now starting to become dependent on connectivity, rather than connectivity being an added feature. We really look forward to sharing with you what the next appliances will be!

With the push of a button

Imagine if your home could fulfil your wishes and follow your commands – with just one click. With Flic – the small flexible assistant for your home – this is now easy to do.

Your favourite coffee is ready waiting for you when you roll out of bed– is there any better way to start the day? Place your Flic button next to your bed, for example, and start your Home Connect coffee machine easily at the press of a button while you make your way downstairs. Press once for a cappuccino.

...when time you make your way, sometimes press once for a cappuccino,
twice for a latte macchiato or hold the button down for a black coffee: How do
you start your day?

Home Connect on Flic is currently available on Apple iOS. So download Flic
now and set up your coffee machine to get started!

Best greetings from Munich,

Home Connect Developer Team
